The Institute of Environmental Science & Research

About ESR

The Institute of Environmental Science and Research (ESR) is a Crown Research Institute (CRI) based in New Zealand. Its mission is to provide scientific and research services to enhance public health, food safety, security, justice systems, and the environment.

What we did

We placed six 'Free on Loan' Necta coffee machines across three ESR centres nationwide.

ESR, Auckland Coffee Machines

How we did it

The challenge

Provide ESR with a selection of coffee machines that are efficient and reliable, to meet the rigorous demands of frequent, high-volume usage.

Additionally, to provide customised solutions for consumables that not only meets the specific needs of ESR but also adheres to sustainable practices. We're helping them minimise their environmental impact and supporting their commitment to environmental stewardship.

NXP's solution

ESR's new coffee machine rollout was driven by three key priorities: Sustainability, Value, and Quality.

We tailored a bespoke solution that included innovative and eco-friendly coffee bean delivery options.

In the Auckland region, we offer bulk bean buckets (top left) delivered on a regular basis.

For Wellington and Christchurch centers, we have developed custom compostable bean packaging (bottom left).

The selected coffee machines accommodate not only high staff numbers but also shift patterns and operational efficiency.

In the Auckland and Christchurch centers we installed two Necta Koro Primes (top left and right) at each location.

In Wellington we installed two larger Necta Kalea Plus machines (bottom left).

TESTIMONIAL

"The team at NXP have been wonderful, helping us navigate the change over from 2 different brands of coffee machines to matching Necta machines. We love the coffee, chai & hot chocolate options. Highlights for us: 1 milk fridge between 2 machines, easy automatic cleaning, and the additional chai option."
